Australia is a prosperous and industrialized nation with a stable economy. Underpinning Australia's strong economy is its open and transparent trade and investment environment, and trade and economic links with emerging economies, particularly in Asia. The U.S. - Australia Free Trade Agreement provides some advantages for U.S. products, which are well regarded as high quality and good value. The United States accounted for US$1.6 billion or nine percent of Australia’s total food and agriculture related imports in 2021.
Market Fact Sheet: Australia

Executive Summary

Australia has proven to be an appealing and profitable market for U.S. companies for many years. Underpinning Australia’s strong economy is its open and transparent trade and investment environment, and strong trade and economic links with emerging economies, particularly in Asia.

Australia is the world’s 13th largest economy. Australia has one of the highest levels of per capita GDP in the world and is ranked first for median wealth per adult according to Credit Suisse’s 2021 Global Wealth Report. Prior to the onset of COVID-19 the Australian economy recorded 29 years of consecutive economic growth. Australia implemented strong restrictions to COVID-19 and had one of the lowest rates of deaths globally. The economic recovery was significantly better than expected with GDP growth in 2021 around five percent. However, inflation has risen sharply in recent quarters, reaching 7.3 percent in the 12 months ending September 2022.

The U.S. - Australia Free Trade Agreement provides advantages for U.S. products as tariff rates for many U.S. food products exported to Australia are zero.

Imports of Consumer Oriented Products

The value of Australian consumer-oriented food imports totaled $12.2 billion in 2021 with the U.S. accounting for US$1.3 billion or 10.3 percent of total imports. Most of Australia’s imports in these sectors are sourced from New Zealand with the United States being the second largest supplier.

Retail Food Industry

Supermarket and grocery expenditures continue to account for the bulk of food retailing purchases with a share of 63.5 percent. The United States accounted for US$1.3 billion (10 percent) of Australia’s total food related imports in 2021. Despite the effects of COVID-19, the market remains an excellent opportunity for U.S. exporters. For more information, please see the Retail Foods report. The latest copy is available on the FAS website.

Top Australian Food Retailers

Woolworths; Coles (Wesfarmers); Aldi; Metcash/IGA

GDP/Population

Population – 25.9 million
GDP ($ trillion) – $1.3
GDP per capita – $58,000

Strengths

- U.S. culture well accepted and similar to Australia.
- No language barriers
- U.S. products have excellent image and acceptance.
- Northern hemisphere seasonal advantage for fresh foods, e.g. fruit and vegetables.

Weaknesses

- Australia has strict quarantine requirements for fresh products. Import permits are required for fresh produce and some products are prohibited.
- Australia is a significant producer of a similar variety of agricultural products.
- Australian labeling and advertising laws are different from the United States, which may require some changes to food labels.

Opportunities

- The U.S./Australia Free Trade Agreement enables many U.S. products to enter Australia tariff free.
- Australian consumers are experimental and desire new and innovative products.
- Opportunity to trial innovative products and capture/gain market share.
- Opportunity to enter into private label arrangements as major players expand their private label offerings.

- “Buy Australian” campaign is significant.
- A focus on fresh food presentation by the major supermarket chains provides advantages to local producers.
- Most categories have substantial market leaders.
- Country of origin labeling is compulsory, and many Australian-made products bear the “Australian Made” logo.

Section I: Market Overview

Americans and Australians have a warm relationship that spans the history of both nations. They share a common heritage, culture, language, and have supported each other in every major international crisis of the past century.

Australia is a prosperous, politically, and economically stable, industrialized nation. It enjoys an enormous natural resource base of agriculture and minerals; a highly developed human resource base; modern legal and financial systems; and a physical and service infrastructure to support complex businesses and industries. Its state-of-the-art transportation and telecommunications systems (both internal and international) also support a well-developed and economically diversified market.

Underpinning Australia's strong economy is its open and transparent trade and investment environment, and its trade and economic links with emerging economies, particularly in Asia.

Australia has one of the highest levels of per capita GDP in the world and is ranked first for median wealth per adult according to Credit Suisse’s 2021 Global Wealth Report. Prior to the onset of COVID-19 the Australian economy recorded 29 years of consecutive economic growth.

According to the Reserve Bank of Australia (RBA), the Australian economy has continued to grow solidly but is expected to moderate over the financial year (July-June). The forecast is for GDP growth of three percent over 2022 and 1.5 percent over 2023 and 2024.

The labor market is very tight with many employers having difficulty in finding workers. The unemployment rate is 3.5 percent, the lowest rate in almost 50 years. Inflation has risen sharply in recent quarters, reaching 7.3 percent in the 12 months ending September 2022.

The Australia-U.S. Free Trade Agreement (AUSFTA) came into effect in 2005 and provides some advantages for U.S. products. For example, tariff rates for all U.S. food products exported to Australia dropped to zero upon implementation of the agreement in January 2005. Australia also has free trade agreements in place with many other countries and regions. Details of these agreements and negotiations are available on the Australian Department of Foreign Affairs and Trade website at: https://www.dfat.gov.au/trade/agreements/trade-agreements.

The United States is the most significant investor in Australia, accounting for a quarter of Australia’s total foreign investment stock. The United States is also Australia’s largest destination for investment abroad, accounting for 34 percent of Australia’s total overseas investment stock. Investment in Australia is facilitated in part by its stable macroeconomic management and relative ease of doing. Further analysis of the relationship between the United States and Australia is available at: https://www.ussc.edu.au/analysis

Australia has an internationally competitive agricultural sector that exports around 70 percent of its output. The Australian manufacturing sector has recently experienced some rebalancing in terms of sectors, products, technologies, and supply chains in response to long-term local and global shifts.
Although Australia is the 21st largest market for U.S. agriculture globally, for several products it is a vital market for U.S. exports. It is the 10th largest market for U.S. consumer food products in total and even more important for some individual products (see table below).

Source: GATS/FAS

Apart from a very strict quarantine regime, Australia offers few barriers to entry, a familiar legal and corporate framework, and a sophisticated, yet straightforward, business culture. While it is important to understand and appreciate Australia’s cultural differences, the long and successful history of U.S. firms in Australia suggests that other U.S. companies will also find this market to be rewarding and attractive. Australia is one of the most urbanized societies in the industrialized world, even though its land mass is the size of the continental United States. Of its almost 26 million people, more than 85 percent live in the large urban areas of Sydney, Melbourne, Adelaide, Brisbane, Perth, and in smaller cities and towns within 50 kilometers of the coast. The center of the continent is flat, dry, mineral rich, and largely unpopulated, while the coastal areas are wet, mountainous, and densely forested. The interior plains are rich and fertile, supporting great varieties of agriculture.
The society is increasingly multi-cultural, with the traditional Anglo-Celtic majority joined by immigrants from Southern and Eastern Europe, the Middle East, Latin America, and Asia. This population mix is influencing cultural diversity and resulting in vibrant restaurant and food processing industries.

Section II: Exporter Business Tips

As educated, affluent consumers, Australians are willing to try new products. The population has absorbed a growing number of newly arrived immigrants from all over the world who bring with them diverse dietary tastes. In addition, foreign travel is relatively common, especially by the generation now entering the work force, and these consumers have broadened their culinary horizons. Australian demographics are like those in the United States, with a large number of two-income families and the consequent need for more processed and consumer-ready foods. Australian consumers are oriented toward the same factors that many U.S. consumers seek – freshness, wholesomeness, and healthy lifestyles. To a large extent, they are prepared to pay extra for them.

Given Australia's large agricultural base, market prospects for U.S. food products are best in areas drawing on innovative products, economies of scale, and the U.S. position as a counter-seasonal supplier of fresh product. The United States faces competition in this market from New Zealand, European and Canadian suppliers, as well as from specialty suppliers in Asian countries. Domestic production is also well established and growing in product lines. Foreign investment in the Australian food sector is substantial, with many large multinational companies participating.

Generally, doing business in Australia is straightforward for U.S. exporters when compared with other foreign markets. Culture, language, and business practices are remarkably common. Subtle cultural differences do exist however, that can either invigorate or undermine a business relationship. In their dealings, both Americans and Australians are wise to take the time and effort to confirm that their
perceptions about roles and expectations are consistent with those of their counterparts. Depending on the product or service to be exported, Australian agents/distributors expect support from their U.S. suppliers, including training, advertising, and promotion. Timely delivery of goods is expected and is rarely a problem, as major U.S. freight forwarders have offices in Australia. Air and sea freight are commonly used.

The Australian market requires that companies be price competitive, expect lower profit margins, and anticipate sales of smaller quantities. In addition to Australian domestic supply, products from all over the world are represented in this market, where sellers and end-users alike are searching for something new. It is important for U.S. companies to adapt their pricing to the local market, which is active and highly competitive. To structure prices competitively, suppliers must consider all the cost elements that imported products must bear. The key factors are freight rates; handling charges; a Goods and Services Tax (GST); marketing costs, such as advertising and trade promotion; and agent or distributor commissions. U.S. exporters should note that sea freight rates from the United States to Australia are high when compared with those from within Asia, and even from Europe.

The cost of living is generally higher in Australia, and this is coupled with higher wages. Australian wholesalers and retailers traditionally have sought the highest markup the market would absorb, rather than thinking of volume buying or selling. Suppliers need to be able to deliver quality products or services at attractive prices. To compete successfully, exporters should consider granting maximum wholesale discounts, keeping in mind that what may seem to be a small transaction to the U.S. exporter appears as a major order to an Australian buyer.

Agents/distributors are key components in developing exports of U.S. consumer-ready foods to Australia. It is recommended that exporters enter the market through a distributor, importer, agent or broker who has a good understanding of the Australian market and targets specific food categories or merchandise managers at major wholesalers and major supermarket chains. Specialist distributors or wholesalers may also be approached.

After sales services, such as cooperative advertising, is an important aspect of successfully entering the market. Innovative packaging has an advantage and is becoming increasingly important to consumers.

Many of the major Australian importers visit the United States at least once a year to see what is available and placing orders if the items are appealing.

**Trade Shows**

The major food and beverage show in Australia is [Fine Food Australia](#), which is held every September alternating between the cities of Sydney and Melbourne. Fine Food is on the list of USDA’s endorsed shows. Admission to Fine Food is "trade only" and is restricted to persons in the food, drink, equipment, and hotel and supermarket trades.

Fine Food is an international exhibition for the food, drink, and equipment industries and is the largest food industry event in the Australasian region. It enjoys the support of major industry organizations and is the only event that allows companies to reach the retail, food service, and hospitality industries at one venue. As well as exhibitors from Australia, regular exhibitors include groups from Asia, the Pacific,
Europe, and the Americas. Buyers from all over Australia and the Asia Pacific region also attend the show.

Major buyers and importers from Australia and the Oceania region attend. Due to Australia’s large geographic size and the high cost of internal airfares and transport, exhibiting at Fine Food is the most cost-effective way for U.S. companies to meet potential partners and customers for consumer-oriented food products in Australia.

In 2023, Fine Food Australia will be held in Sydney at the International Convention Centre, Darling Harbour, September 11-14, 2023

Section III: Import Food Standards and Regulations/Import Procedures

- Australia has strict food standards and labeling requirements that are set out in the Australia New Zealand Food Standards Code. If U.S. products can meet these standards, they may have good market potential in Australia.
- The Food and Agriculture Import Regulations and Standards (FAIRS) Country Report for Australia contains detailed information on Australia’s food standards, labeling requirements, import regulations, etc. This report can be viewed/downloaded at the following Internet site: https://gain.fas.usda.gov/#/search
- Exporters should also work very closely with their importers/distributors to ensure that all requirements are met before any product is shipped.
- Australia also has very strict sanitary and phytosanitary standards, which are an impediment to the import of many fresh food products.
- The Australian Department of Agriculture, Fisheries and Forestry (DAFF) maintains an online database, BICON, which includes import conditions for all agricultural products coming into Australia. U.S. exporters should utilize this database to ensure that they are going to be able to meet all the relevant quarantine conditions.
- Food safety and plant and animal health import regulations can be found on the DAFF Internet site at: https://www.awe.gov.au/biosecurity-trade/import or through links in the FAIRS report mentioned above.
Section IV: Market Sector Structure & Trends

Market Sector Structure

Retail Food Sector
Health, wellness, and the environment continue to be key purchasing factors for Australian consumers. Portion sizes are increasingly important as consumers want quality over quantity, and they expect packaging to be informative and environmentally responsible. The value of Australian consumer oriented and fish, and seafood imports totaled US$13.6 billion in 2021. The U.S. accounted for US$1.3 billion or 10 percent of Australia’s total food related imports. Supermarket and grocery expenditures continue to account for the bulk of food retailing purchases. For more information, please see the latest Retail Food Sector report.

Food Processing Ingredients Sector
Australia’s food, beverage, and grocery sectors account for one-third of the country’s total manufacturing industry. In 2021 food industry turnover totaled A$116 billion (US$77.6 billion) a rise of one percent over the previous year. The industry is comprised of over 16,000 enterprises. For more information, please see the latest Food Processing Ingredients Sector report.

Food Service Sector
The Australian consumer foodservice industry is valued at A$54 (US$41) billion. Australia’s commercial foodservice sector is a competitive market and with an ageing population, the institutional foodservice sector (aged care, hospitals, etc.) continues to grow. Most industry operators in the hotel and resort sector derive a significant portion of revenue from the sale of meals and beverages prepared at onsite restaurants. COVID-19 related government restrictions had a large impact on the HRI sector over the last two years, but the Australian Government has now lifted all restrictions including hotel and restaurant capacities, and domestic and international travel. This is contributing to a rapid recovery of the HRI sector, opening opportunities for US exporters. For more information, please see the latest Food Service - Hotel Restaurant and Institutional Industry report.

Market Trends

- **Positive nutrition:** The drive to make food and beverages healthier continues to gain momentum in Australia. Australian consumers do not want to be told what not to eat and are instead looking for more constructive guidance to assist their food and beverage purchases. This encompasses a movement from food avoidance (such as products with reduced fat and sugar) to positive nutrition and the inclusion of healthy food and ingredients.

- **Healthy indulgence:** Australians aren’t really interested in strict diet plans, but there is a huge spike in people trying to control their portion sizes. They don’t want to cut out certain food groups or flavors, but they are willing to control the amount they eat. Therefore, the quality over quantity mentality is an important consideration for marketers. Claim terms such as “portioned indulgence” or “treat size” convey the message that sensory benefits have not been foregone for the sake of health.

- **Demand for healthy food** is being boosted by demographic shifts. An aging population and rising birth rates have had a positive impact on the development of the health and wellness market. Middle-aged or elderly consumers and parents with young children tend to be better informed about health and dietary matters than other groups, and thus represent a key target for health and wellness manufacturers.
• **Packaging**: Packaging has grown in importance in recent years and innovative packaging is a valuable selling point in the Australian market. It is often the packaging that conveys convenience to the consumer, and snazzy packaging attracts the attention of consumers. Packaging ensures that offerings conform to market trends by communicating unique selling points and offering freshness and convenience. By being lightweight, packaging can reduce the product’s carbon footprint. Increasingly, consumers expect that packaging will also be recyclable. Studies have found that half of Australians think food and drink products are over-packaged and three quarters of them would consider boycotting a product if it didn’t meet their environmental criteria. The [Australian Packaging Covenant](https://www.resourceseducation.org/covenants/auc/) is a national regulatory framework that sets out how governments and businesses across Australia share the responsibility for managing the environmental impacts of packaging.

• **Freshness** is an important area of concern for packaged food sales. Foodservice players and consumers appreciate the peace of mind from knowing the offerings are in good condition. This can be achieved with single-serve pack sizes, re-sealable packaging, and clear on-pack communication.

• **Australia’s top food priorities** are eating more fresh fruit and vegetables; smaller portion sizes; reducing sugar intake; eating healthier snacks; and cutting down on fat.

• **Snacking still popular** – two-thirds of respondents to a recent survey indicated that they eat between meals and that healthy snacks are a priority.

---

**Section V: Agricultural and Food Imports**

Trade statistics can be obtained at the publicly available [USDA/FAS Global Agricultural Trade System (GATS)](https://www.gats.usda.gov).

**Best Product Prospects**

The organic, healthy, and natural products market in Australia remains important. Although Australia is a large producer of organic raw products, it does not have the manufacturing capacity to satisfy demand for processed foodstuffs. Prospects are excellent for organic and natural ingredients as well as consumer-ready processed foods and beverages. It should be noted, however, that fresh organic fruits and vegetables are not good prospects for this market due to mandatory import treatment requirements. Australian consumers are adopting a back-to-basics mindset, focusing on simple ingredients and fewer artificial or processed foods.

The types of products consumers are demanding include: all natural; no artificial colors; low sugar/sugar free; no artificial flavors; and low fat/fat free. U.S. exporters who can incorporate ingredients and preparation methods that improve the nutritional profile of products will be strongly positioned to succeed in this market.

It should be noted that although consumers are trying to eat healthier, they have not completely ruled out buying confectionery products.
